

## BEYOND PCR™ MACHINE FILM

- Industry-leading sustainable machine film with Post Consumer Recycled content
- Ultra high-performance film made to increase containment and performance while using less virgin plastic
- Patented technology allows enhanced load containment
- Certified Post Consumer Recycled Film
- Tear resistance for ABC load profiles
- One side cling to eliminate tails
- Superior quality and consistency in a PCR film
- Source reduction and cost savings
- Designed for 100% recyclability
- Made in North America for circularity

Part Number	Gauge	Micron	Width (cm)	Length (ft)	Rolls Per Skid	Roll Weight (lbs)

Paragon Films is committed to minimizing packaging waste. We reuse or recycle most pallets and excess plastic material generated by our manufacturing process. This is often referred to as PIR (post-industrial recycled) material. Paragon Films promotes sustainability by investing in technologies to produce superior thin gauge films which reduce waste and overall carbon footprint. Paragon Films uses a mix of polypropylene and polyethylene resins in its stretch film. Please check with your local recycling center to determine its ability to recycle our film. Post-consumer stretch film is extremely sought after to be recycled into a variety of products including bags, shrink films, sheet and lumber applications.
