tetraGRIP™

STUDLESS SIDING SYSTEM

Save an average of 20%* by eliminating the time needed to locate and mark studs, and to measure and cut planks to land on studs. Fastening fiber cement siding directly to OSB with the patented 1-1/8" fastener helps prevent unintended damage to utilities behind sheathing and more importantly may increase your crew's productivity allowing you to take on more jobs per year.

- NO MARKING AND HITTING STUDS
- LESS MEASURING
- LESS CUTTING
- LESS WASTE
- LESS RISK OF CALLBACKS

WHY IT WORKS BETTER

ROTATION BONDS NAIL TO WOOD

Mechanically bonds with the wood fibers for superior holding power.

STRONG NON-DESTRUCTIVE WOOD INTERACTION

Efficient rotation helps eliminate wood destruction common in standard ring shank nails.

SUPERIOR WITHDRAWAL RESISTANCE

The barbed helix-to-wood engagement creates a high load capacity and does not require a nail-to-stud interaction.

ELIMINATES NAIL INDUCED FLOOR SQUEAKS

TetraGRIP fasteners rotate as they drive to bond with the wood fibers. Use of glue between sheathing panels and floor framing is not required.

REDUCES BUILDER WARRANTY COSTS

Fewer call backs & repair costs for builders.

REDUCES FRAMER REPAIR COSTS

More efficient than screws and saves the framing company time and labor cost.

FOR SUBFLOOR INSTALLATION
